TRANSACTIONS OF THE MOSCOW MATHEMATICAL SOCIETY

Editors: Olga A. Oleinik, the original Russian journal; L. W. Longdon, for the London Mathematical Society, and Ben Silver, for the American Mathematical Society, the translation into English.

The Transactions of the Moscow Mathematical Society was inaugurated in 1952. In 1963 the London Society and the American Society initiated the translation of the journal, beginning with Volume 12, and have continued to share the responsibility for translating the journal since that time.

This journal contains long research papers, each issue being comprised of five to nine papers in recent years. Two issues are contained in each volume of about 550 pages. The translation volumes appear about one and one-half years after the original. The Russian editorial board, in addition to Oleinik, the editor-in-chief, is composed of P. S. Aleksandrov, G. M. Fateeva, I. M. Gel'fand, O. N. Golovin, A. N. Kolmogorov, Ja. G. Sinai and J. R. Volovič. An effort is made by them to accumulate papers of similar subject matter for each issue, though this is not always possible.

The papers to be included in the second issue for 1980 (Russian Volume 38), which will appear toward the end of 1980, are:

- A. V. Arhangel'skiĭ, *On invariants of character and weight type.*
- V. V. Nikulin, *Finite groups of automorphisms of Kähler surfaces of type K3.*
- P. K. Rasevskiĭ, *A description of the closed invariant subspaces in some function spaces.*
- V. S. Samovol, *Linearization of systems of differential equations in the neighborhood of invariant toroidal manifolds.*
- L. V. Volevič and S. G. Gindikin, *The Wiener-Hopf equation in generalized functions that are smooth on a half-line.*

Most of the papers in this journal are in pure mathematics, and all are at a high level. Any library considering subscribing to TRANSACTIONS OF THE MOSCOW MATHEMATICAL SOCIETY may write to the AMS for an examination copy.

Mathematical Reviews Cumulative Index
1973 - 1979

VOLUMES 45 THROUGH 58 OF MATHEMATICAL REVIEWS

This massive index, the first cumulative index of Mathematical Reviews containing both author and subject listings, is being prepared from the working files of MR and will index all the reviews in volumes 45 through 58, producing an estimated 700,000 entries representing over 230,000 entries in MR for the period. It will total about 9,200 pages in 12 volumes.

The CUMULATIVE INDEX will have the same form as the Annual Index for 1978 as it is being generated by the same computer program.

The first part, an **Author and Key Index** will be about 5,000 pages. The entries will give full bibliographic information about all items that have been reviewed in MR between January 1973 and December 1979, inclusive. This is about 220,000 entries. In addition, there will be an entry for about 2,500 items not reviewed in MR for which the editors think bibliographic information should be made available. They will be treated exactly as reviewed items, generally with references to *Zentralblatt für Mathematik, Reverativnyi Žurnal,* or other reviewing journals.

Items are listed alphabetically by author; those having several authors are listed in full under each author. Surnames of authors are cross-referenced for name changes or variations of spelling. The original entry for which an erratum or other commentary has been reviewed in a subsequent entry will be identified by an (E).

The author index section is estimated to have about 300,000 entries because of multiple authors.

In the **Author Index** the names of persons associated with an item in a capacity other than that of author, e.g., editor, translator, subject of a biography, are also listed.

The **Key Index** section of the author index will consist of all items for which there is no clear author and will be about 70 percent cross-referenced. Included are proceedings of meetings, tables, obituaries, biographies, etc.

The entries under a given heading (i.e., the author or a title) are listed in order of publication dates. Co-authored items are treated on the same basis as those by the author alone.

The **Subject Index,** to consist of about 380,000 listings on 4,200 pages, will cover all subject areas as classified by MR. For each item there will be one full listing in each subject area in which it has been classified, with all authors, title and MR number, if any. Cross-references will be given under each author after the first to the original listing.

The arrangement of each title entry is that of the heading of the original review in MR. Titles in English, French, German, and Italian are usually given as they appeared in the original. Articles in other languages are given in English translation.
